/*****
*      Author:  Jessica Schuler
*      Date Created:  10-3-13
*      Last Modification Date:  10-13-13
*      Filename:  A1.cpp
*
*      Overview:
*          This program takes a user input and converts that number to
*          a hexadecimal and binary number.  It also shows the min and
*          max numbers, signed and unsigned, for short, long, and int.
*      Input:
*          The user will input thier favorite number.
*      Output:
*          The program will output the users number converted to
*          hexadecimal and binary.  If will also show the min and max
*          numbers, signed and unsigned, for short, long, and int.
*
